

ONELAN Digital Signage

Balancing power
with simplicity

Engage your audience

Improve your communication

Digital signage is a more effective method for communicating your message, providing significant cost savings and flexibility over traditional printed posters and notice boards.

With numerous studies showing significant improvements in sales revenue and product recall, Digital signage is now a key tool in solving an increasingly wide range of communication tasks and business problems, and has become as important as websites and brochures.

The correct use of video, animation, images and text to create timely, compelling, relevant and sticky content works to attract, retain and engage your audience. Easy to use design and management tools enable widespread adoption of an internal communications network within an organisation, and ensure content is always fresh, relevant and engaging.

ONELAN provides a rich platform on which any organisation can build their wider communication strategy, be it a single screen in a foyer, a wayfinder in a shopping mall or a large global retail network.
